General Description

The XL2576HVS is a 52 KHz fixed frequency buck DC/DC converter, capable of driving a 3A load with high voltage, high efficiency. The XL2576HVS supports wide input operating voltage range of 4.5V ~ 50V and a maximum duty cycle of 90% output. A built-in loop compensation module reduces components in the system, lowering power system cost and reducing printed circuit board space. The XL2576HVS is available in adjustable, fixed 5.0V and 12V versions. The XL2576HVS has built-in current limit protection and so on.

Applications

- Automotive Electronics

Table 1. Pin Description

Pin Number	Pin Name	Description
1	VIN	Supply Voltage Input Pin. XL2576HVS DC operating voltage range from a 4.5V to 50V . Bypass VIN to GND with a suitably large capacitor to eliminate noise on the input.
2	SW	Power Switch Output Pin (SW). Output is the switch node that supplies power to the output.
3	GND	Ground Pin.
4	FB	Feedback Pin (FB). Through an external resistor divider network, detects the output voltage for adjustment, with an adjustable version reference voltage of 1.23V.
5	EN	Enable Pin. Drive EN pin low to turn on the device, drive it high to turn it off. Floating is default low.
