### General Description

The XL556 is an unipolar Hall switch sensor that optimized for wide voltage, low quiescent current and wide temperature range. XL556 supports a power supply voltage of up to 50V and provide a load capacity of up to 40mA. Widely used in automotive electronics, industrial control and other applications. Adopting a collector open circuit output architecture, it has strong resistance to electromagnetic interference.

The XL556 integrates a reference voltage source, temperature compensation, Hall array, differential comparator, hysteresis latch, and power output stage, providing high magnetic field consistency, and strong immunity to electromagnetic interference over the full voltage range and full temperature range.
